August 2013

At the Ohio Department of Agriculture, we spend a great deal of time formulating and enforcing rules and rural policy that affect agriculture. Our policy decisions resonate through all levels of state government right down to the guy out in the field thinking about how he is going to pay his taxes, keep his farm productive, and pass his business on to the next generation.

I am from a farm family, so I can tell you with certainty that most farmers understand that change is inevitable. As a leader in state government, I can also tell you that as times change, so must public policy.

The past several years have brought some incredible changes to this state.

Ohio is successfully emerging from one of the most pivotal periods in its history, during which time we closed a historic \$7.7 billion budget imbalance without raising taxes. Governor Kasich has long believed that Ohio's taxes are too high. The governor's tax cuts will mean an income tax reduction and small business tax cut. He also eliminated the estate tax, which means farmers will no longer be penalized for doing their jobs.

More good news for agriculture is that the governor's Jobs and Transportation Plan will inject \$3 billion into infrastructure projects to help you move your grain and livestock across the state.

The result is that Ohio's private sector has gone from losing hundreds of thousands of jobs to adding more than 160,000 jobs since 2011. Ohio's strong agricultural production, along with a growing population and advances in technology, mean that the job potential in food and agriculture-related fields in this state will only get stronger. The Bureau of Labor and Statistics projects jobs for agriculture and food science majors will grow 16 percent between 2008 and 2018. That is good news for our state.

Incredible changes have also been happening at the Ohio Department of Agriculture. Staff members spend a majority of their time and budget to uphold the department's on-going duties of safeguarding the food supply and protecting the state's plant and animal interests. In addition to those duties, there are several other topics on the forefront of our regulatory agenda, including nutrient management, interstate meat shipment, and implementing new duties to protect the public and non-native animals through the Dangerous Wild Animals Act.

Those are just a few of the issues that held our attention in 2012. In the pages of this report, you will find a comprehensive overview of these and other items.

The future of Ohio agriculture is bright and full of opportunity. Ohio agriculture and rural Ohio is about so much more than cows and combines. It is about technology, advances in science and a way to maintain the future of our state.

In the coming year, I look forward to working on your behalf.

Sincerely,

David T. Daniels
Director

Serving Farmers and Protecting Consumers Since 1846

Ohio Department

of

The Ohio Department of Agriculture provides leadership for Ohio's No. 1 industry – food and agriculture – to create greater economic opportunity for Ohio's farmers and processors; to preserve and enhance Ohio's bountiful resources; and to partner with Ohio's research institutions to further the development of new agricultural products and services. The department administers numerous regulatory, food safety and consumer protection programs for the benefit of all Ohioans and helps build marketing opportunities for Ohio farmers and food processors.

The department's workload is divided among the following divisions and programs: Administration, Amusement Ride Safety, Animal Health, Consumer Protection Laboratory, Dairy, Enforcement, Farmland Preservation, Food Safety, Livestock Environmental Permitting, Markets, Meat Inspection, Ohio Grape Industries, Plant Health and Weights and Measures.

2012-2013 events

Ohio Agriculture Week

Ohio Department of Agriculture Director David T. Daniels kicked off Ohio Agriculture Week in Ashville by inducting the Der Decker Baurenhoff Farm into the Ohio Bicentennial Farm program. This farm is the first to be inducted into the program, which was launched in 2013.

The Der Decker Baurenhoff Farm, owned by Bob Fagan, is one of 16 stops Daniels made during Ohio Agriculture Week, March 11-15, to honor local farmers, small businesses for the tremendous economic impact they have on the state.

Ohio Agriculture Week is celebrated each March to help educate Ohioans about the importance of the state's \$105 billion food and agriculture industry, on our dinner plates and beyond.

Ohio Department of Agriculture Director David T. Daniels (left) presents a Bicentennial Farm certificate to three generations of the Fagan family (second from left): Bob Fagan, Kenneth Smith, Irene Fagan, Ann (Fagan) Smith, Terry Smith, and Eileen Smith.

Dangerous Wild Animals Facility

The new Dangerous Wild Animal facility on the Ohio Department of Agriculture's Reynoldsburg campus helps keep people and non-native animals safe.

In 2012, legislation was passed requiring all owners of dangerous wild animals to register with the Ohio Department of Agriculture's Division of Animal Health. Registrations were required to be completed by November 5, 2012.

Construction of a state-of-the-art holding facility began in late 2012. The purpose of the building is to hold dangerous wild animals in a secure environment until appropriate re-location arrangements are made. The facility is key for the Ohio Department of Agriculture to uphold new regulations governing the ownership of dangerous wild animals.

The facility is one-of-a-kind, and was built with input from zoos and veterinarians to assure the security of the people caring for the animals and the general safety of people in the surrounding community, while at the same time maintaining the safety and comfort of the animals held in this building.

Agriculture is Cool! at the Ohio State Fair

A painting produced by 12-year old Samuel Stahl of Fostoria was chosen as the 2012 "Best in Show" entry.

Governor John R. Kasich and Ohio Department of Agriculture Director Daniels announced the winners for the 2012 "Agriculture is Cool" visual arts contest. Ohio school children enrolled in school or home schooled during the 2011-2012 academic year shared their personal interpretation of why Ohio agriculture is "cool" for their chance to win concert tickets at the Ohio State Fair.

Entries, which included an original video, photographs, drawings, and paintings, were judged in the four

different age categories: K-2, 3-5, 6-8, and 9-12. Ten entries were selected as winners in their respective categories:

- Isabella Yandura, Delaware, Delaware County, age 5
- Sarah Konecny, Perrysburg, Wood County, age 6
- Asa DeMange, Versailles, Darke County, age 7
- Luke Jennings, Felicity, Clermont County, age 8
- Emma Meagrow, Sandusky, Erie County, age 8
- Brandon Barr, Xenia, Greene County, age 9
- Ross Black, Ashville, Pickaway County, age 12
- Samuel Stahl, Fostoria, Hancock County, age 12
- Spencer Channell, Powell, Delaware County, age 14
- Sydney Black, Ashville, Pickaway County, age 14

Cooperative Interstate Meat Shipment Program

For nearly two decades, the Ohio Department of Agriculture has supported the concept of allowing state-inspected establishments to be able to ship their state-inspected products across the state line. As a part of the 2008 Farm Bill, Congress directed U.S. Department of Agriculture's Food Safety Inspection Service to promulgate changes to the laws allowing selected state establishments to ship their state-inspected products across the state line.

The final rule became effective in 2011. Department officials applied to and began working with the federal government to meet requirements of the regulations. On August 8, 2012, Director Daniels signed the Cooperative Interstate Shipment Cooperative Agreement.

Selected state inspected establishments, as a result of the Cooperative Interstate Shipment Program, will now be able to ship their products in interstate commerce. The advantage of qualifying for the program is that the establishment will have all of the United States as a market place, while still having the same state inspector. Ohio was the very first state in the nation to be accepted into the program and has seven establishments that have been approved.

- One establishment in Cleveland estimates their business at the outset will grow by one million dollars a year and they have more out of state customers wanting their quality products. The business estimates their business will triple at the start and their products will be distributed to 45 states.
- The Baltic establishment has expanded their facility in anticipation of what the ability to ship in interstate commerce means for the "backyard flock" producer.

Ohio Agriculture Women of the Year

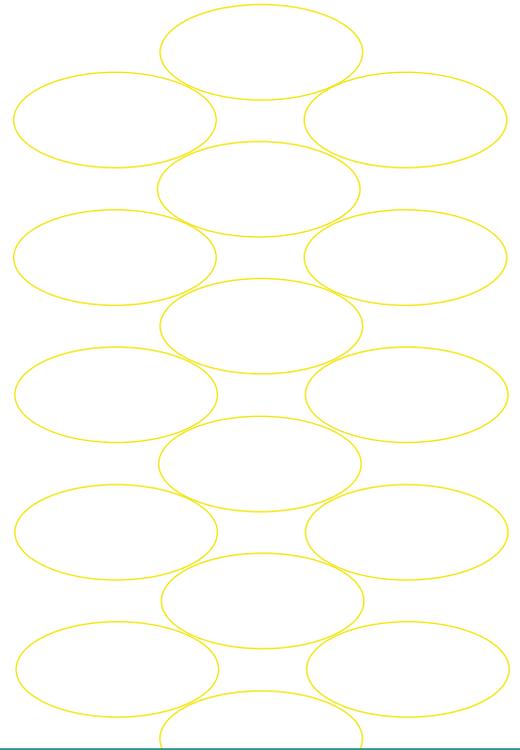

Ohio First Lady Karen W. Kasich and Ohio Agriculture Director David T. Daniels honored four 2012 Ohio Agriculture Women of the Year Award winners at a reception at the Ohio Governor's Residence and Heritage Garden: Amy Sigg Davis (Lebanon); Stephanie Jolliff (Kenton); Karen Oberst (Findlay); Bev Roe (Hamilton).

The award program is administered through the Ohio Department of Agriculture and the Office of the First Lady. Nominations were reviewed by a diverse committee of industry leaders. Winners were selected on the basis of their outstanding contributions to Ohio agriculture, leadership and advocacy in the agricultural community and significant impact on the agriculture industry as a whole.

Pictured (left to right): Karen Oberst, Bev Roe, Director David T. Daniels, First Lady Karen W. Kasich, Stephanie Jolliff, and Amy Sigg Davis.

Protecting Plant and Animal Life

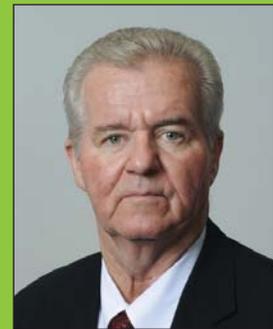

Animal Health and Animal Disease Diagnostic Laboratory

Veterinarians and scientists in the Animal Health Division help protect the health and safety of Ohio's livestock and poultry industries. Animal Health staff members provide quick response in the event of an animal disease outbreak, provide ongoing tests and inspections of livestock to verify the absence of disease, and control and eradicate infectious animal diseases in Ohio.

Staff members license and inspect livestock dealers, weighers, renderers, raw rendering collectors, garbage feeders, and white-tailed deer farms. Staff members also actively participate in a number of federal cooperative agreements with the U.S. Department of Agriculture's Animal and Plant Health Inspection Service and the Food and Drug Administration relative to national disease control programs: John's disease, scrapie, bovine spongiform encephalopathy, foreign animal disease, exotic Newcastle disease, avian influenza, chronic wasting disease, premise and animal identification, tissue drug residues, brand registration program, and exhibition livestock inspection and testing. Division staff members work closely with the Ohio Poultry Association through the Ohio Egg Quality Assurance Program to reduce consumer exposure to *Salmonella enteritidis*.

The division administers the Animal Disease Diagnostic Laboratory, which provides regulatory testing support for disease control programs and full diagnostic

*Dr. Tony Forshey,

Lab Director, Consumer
Protection Laboratory
and Animal Disease
Diagnostic Laboratory*

laboratory services for veterinarians, livestock producers and agribusinesses. It is one of 42 accredited laboratories in the United States. As the only American Association of Veterinary Laboratory Diagnosticians accredited laboratory in the state of Ohio, the lab operates under guidelines that ensure the quality of personnel, facilities and procedures.

This laboratory serves as a participating member of the National Animal Health Laboratory Network, providing high-caliber diagnostic testing support in a number of animal disease situations and provides surge capacity for the nation in the event of a regional or national animal disease outbreak.

In 2012, division staff members continued to enforce Ohio’s first comprehensive set of livestock care standards, which went into effect in 2011. These standards are required by Ohio’s constitution following the passage of State Issue 2 in 2009. The statewide ballot initiative specified creation of the 13-member Ohio Livestock Care Standards Board with the responsibility of obtaining industry and public input to develop livestock care rules.

The standards apply to all species of livestock raised for food and fiber, including: swine, poultry, dairy cows, beef cattle, veal, sheep, goats, llamas and alpacas. The care standards also apply to horses, ponies, mules and donkeys.

The standards are practical for livestock producers of all sizes and production systems. Proper care of livestock, guided by these regulatory standards, further assures the state’s goal of promoting a safe, affordable food supply. The standards govern all aspects of animal care – water, food, handling,

housing, management, medicine, transportation and humane euthanasia. The board meets three times per year to discuss the standards.

Also in 2012, legislation was passed requiring all owners of dangerous wild animals to register with the Ohio Department of Agriculture’s Division of Animal Health. Registrations were required to be completed by November 5, 2012.

Following controlling board approval, construction on a state-of-the-art holding facility began in late 2012. The purpose of the building is to hold dangerous, wild animals in a secure environment until appropriate re-location arrangements are made. The facility is key to the Ohio Department of Agriculture being able to uphold new regulations governing the ownership of dangerous wild animals.

Dangerous wild animal experts from across the nation met with State Veterinarian Dr. Tony Forshey (right) and other department staff to discuss care standards to be addressed in new legislation.

Plant Health

The Plant Health Division is responsible for enforcing many consumer and public protection regulations. Staff duties include testing germination of packaged seeds, verifying label statements on feed and fertilizers, regulating plant nursery stock, monitoring the financial stability of grain elevators, registering pesticides, licensing pesticide applicators, investigating pesticide use complaints, and working with the U.S. Department of Agriculture's Animal Plant Health Inspection Service and the U.S. Forest Service to control invasive pest species. The division's goal is to assure businesses that produce, process and distribute agricultural products provide safe and properly labeled products to consumers.

Pesticide and Fertilizer Regulation

The division's Pesticide and Fertilizer Regulation Program regulates the use and distribution of pesticides as well as the manufacturing and distribution of fertilizer, lime, and agricultural additives. This section issues licenses to pesticide applicators and serves as the registrar for pesticide and fertilizer companies. Through routine inspections, staff members enforce the state laws and rules that govern these activities. In addition to these responsibilities, staff members conduct inspections for the U.S. EPA in accordance with a cooperative agreement to ensure compliance with the Federal Insecticide, Fungicide and Rodenticide Act.

In 2012, there were 28,690 licensed pesticide applicators, 14,803 registered pesticide products and 4,498 registered specialty fertilizers in Ohio. Training and testing sessions for certification and re-certification of pesticide applicators were also held throughout the year, helping to assure the safe use of pesticides and preventing misuse and mishandling.

This section also organizes the Clean Sweep Pesticide Disposal Program, holding three regional pesticide collections to assist farmers with a safe and environmentally responsible disposal of unusable, outdated pesticides.

Grain, Feed and Seed Program

The Grain, Feed and Seed Program licenses and regulates commodity handlers in Ohio; helps assure label claims are accurate on all agricultural, vegetable, flower and lawn seeds; and monitors animal feed, including pet food, to make sure claims of protein, fat, vitamins, minerals and antibiotics are accurate.

Licensed grain handlers are required to meet certain net worth requirements, verified by financial statements annually submitted to the department. Licensed handlers are required to have insurance coverage equal to full-market value on all grain in their facilities to protect all or part of their losses in case of fire or other disasters. This section also administers the state grain indemnity fund, which reimburses eligible farmers when a licensed elevator becomes insolvent.

*Matt Beal, Chief,
Plant Health*

Inspectors examine records and check production facilities for verification that feeds are manufactured properly. They help assure precautions are taken to prevent possible cross-contamination and that feeds are correctly labeled to prevent any prohibited material from being fed to ruminants.

Program staff works with the U.S. Food and Drug Administration performing inspections to help prevent the occurrence of bovine spongiform encephalopathy. The section completed another successful year, finding no violations of these regulations or any serious violations of the U.S. Food and Drug Administration's medicated feed regulations.

Plant Pest Control

Ohio's green industry is one of the highest-value segments of the state's agricultural sector. The Plant Pest Control Program helps protect the state's plant nurseries and consumers by performing annual inspections to detect pests that pose a threat to plants. This section enforces federal and state quarantines that restrict the movement of articles capable of harboring destructive pests. It provides inspections and phytosanitary certificates for shipments of grain, seed, logs, lumber, greenhouse plants and other agricultural commodities destined for other states and foreign markets. The Plant Pest Control staff members also perform exotic pest surveys for destructive insects and disease. Early detection of these pests can increase the likelihood of control and decrease the negative impact to growers or the environment.

Over the past few years a small twig beetle, native to the Southwestern U.S., has been attacking eastern black walnut trees and infecting the trees with a newly described fungal pathogen of unknown origin causing the disease known as Thousand Cankers Disease (TCD). TCD has been killing black walnut trees in high numbers in Colorado and other western states. In July 2010 this insect/disease complex was found affecting eastern black walnut trees in the Knoxville, TN area and subsequently in Richmond, VA and Bucks County, PA.

Because of this threat to Ohio’s Eastern Black Walnut resource, the Plant Pest Control section took measures to protect Ohio’s walnut trees by drafting a quarantine regulation which took effect on September 7, 2012. Walnut materials capable of spreading this pest are now restricted from entering Ohio. U.S. Forest Service estimates rank Ohio as high as second in the volume of standing walnut timber. Walnut is a high value timber species and an important Ohio export.

Over the past few years, the Plant Pest Control section collaborated with the Ohio Department of Natural Resources Division of Forestry, as well as other federal partners, to conduct surveys and develop plans to respond to the discovery of the harmful pest, hemlock woolly adelgid. This pest was first discovered in Meigs County in January of 2012 and has since been detected in a total of three counties. Hemlock is an ecologically important tree species and widely present in Ohio’s State Parks and Forests. The department has enacted quarantine regulations to attempt to reduce the spread of hemlock woolly adelgid within Ohio.

Working closely with the U.S. Department of Agriculture’s Animal and Plant Health Inspection Service, the Plant Pest Control section continues to support the efforts to survey, contain and eventually eradicate the Asian Longhorned beetle from southeastern Ohio. Asian Longhorned beetle was discovered in Clermont County in June 2011. This invasive beetle poses a threat to Ohio’s hardwood forests (more than \$2.5 billion in standing maple lumber) and the state’s \$5 billion nursery industry which employs nearly 240,000 people. Currently there are 61 square miles under quarantine in Clermont County for the Asian Longhorned beetle.

The European Gypsy Moth is a non-native insect threatening our hardwood forest and ornamental plants in Ohio. It will feed on more than 300 different species of trees and shrubs, with oak being its preferred host. Since its accidental release in Massachusetts in 1869, this destructive pest has slowly moved westward, reaching Ohio in 1971 when the first male moths were trapped in Ashtabula County. The Ohio Department of Agriculture’s Gypsy Moth Program is part of a national integrated pest management program that involves several state agriculture departments along the leading edge of the infestation and the U.S. Department of Agriculture’s Forest Service.

Traps are placed across Ohio to detect, isolate, and monitor gypsy moth populations. Treatments are conducted to suppress, slow the spread of, or eradicate any developing populations. Currently 51 counties in Ohio are under quarantine for movement of regulated materials.

In the spring of 2012, Plant Pest Control staff worked to contain and trace the source of the first detection of boxwood blight in a nursery in northeast Ohio. Inspectors worked with the grower to quickly sample, test and isolate the infestation. Boxwood blight is a disease caused by a fungus that threatens the health and sustainability of boxwood plants which are widely grown and sold as an ornamental in Ohio’s landscapes. This was the first detection of boxwood blight in Ohio. Since that time no new infestations have been discovered.

In 2010, the department established the Ohio Plant Diagnostic Network, which is a cooperative partnership between the department's Plant Health Diagnostic Laboratory and The Ohio State University's C. Wayne Ellett Plant and Pest Diagnostic Clinic. This newly established network brings research and regulation together to more efficiently address Ohio's plant pest, disease and diagnostic needs; eliminates duplicative functions; and increases response efficiency to pest or disease outbreak. Following the National Plant Diagnostic Network model, this lab offers remote teaching and diagnostic nodes across Ohio that will facilitate a more rapid response to diseases and pests, as well as provides remote areas of the state access to educational opportunities.

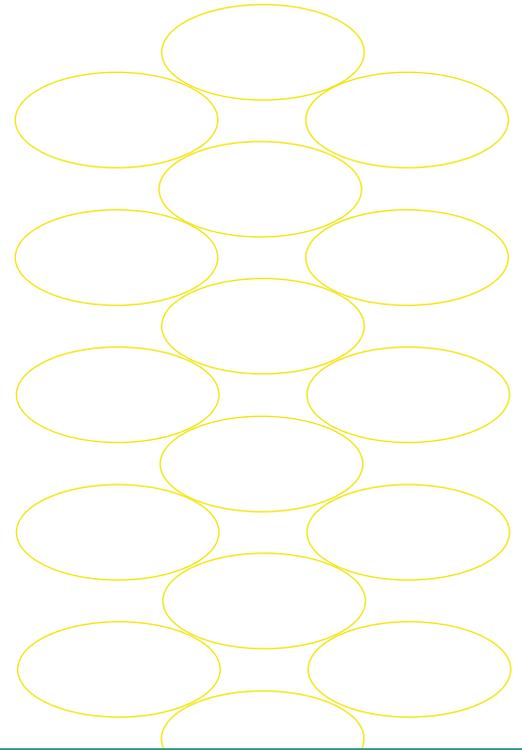

The Plant Health Diagnostic Lab was conceived, designed, and constructed to meet the U.S. Department of Agriculture Animal and Plant Health Inspection Service-PPQ 526 permit containment specifications. The lab is versatile and handles viral, bacterial, fungal, oomycete, and nematode pathogens, as well as insect pests requiring containment conditions. Department staff maintain the U.S. Department of Agriculture Animal and Plant Health Inspection Service 526 permits to receive infected plant material from the contiguous 48 states, as well as to receive restricted *Phytophthora ramorum* and plum pox virus samples. Laboratory staff also maintain certification to perform the U.S. Department of Agriculture's molecular diagnostic assays to detect *P. ramorum*.

In 2011, the lab added a diagnostic node to the OSU South Centers Research Station in Piketon, Ohio, bringing the total number of operational nodes throughout the state to eight. The Pike County node will serve the vegetable and forestry industries in the south central and southeast part of the state. In 2012 the department secured funding to equip a node, which helps quickly identify potential harmful pests, to serve the state's nursery industry in northeast Ohio.

In 2012, the lab in Reynoldsburg detected the first incidence of the boxwood blight pathogen, *Cylindrocladium pseudonaviculatum*, in Ohio. The digital diagnostic node technology facilitated rapid identification of the pathogen, confirmation by USDA, and initiation of response efforts in less than twenty four hours.

Safeguarding the Food Supply

Consumer Protection Laboratory

The Consumer Protection Laboratory is Ohio's premier food and agriculture testing lab and carries out an important component of the department's mission to protect the public. Scientists test food, feed, fertilizers, pesticides and animal exhibition and race track samples. The lab houses the official Equine Drug Testing Laboratory for the Ohio State Racing Commission. It also is the state's primary emergency response lab for biological and chemical terrorism in food and environmental products as a member of the U. S. Department of Agriculture's Food and Drug Administration sponsored Food Emergency Response Network (FERN). Staff members help assure the safety and provides consumer protection for Ohio's food supply, agricultural products and animal competitions and exhibitions.

The lab analyzes samples originating in the food chain - from the farm, through processing and distribution, to the retail level. Microbiologists test dairy products, raw and processed meat products, vegetables, fruits, drinking water and dairy process water for bacteria that cause foodborne illness. Chemists provide assurance that dangerous pesticides are not present in Ohio food products. They also confirm the claims made on food and feed labels, evaluate apple juice and cider for Patulin, test maple syrup for lead, and test food samples for extraneous matter in response to consumer complaints. Regulatory action is taken if bacteria or dangerous chemicals are found.

*Dr. Beverly Byrum,
Lab Director, Consumer
Protection Laboratory
and Animal Disease
Diagnostic Laboratory*

The Analytical Toxicology Laboratory is the official drug testing lab for the Ohio State Racing Commission. Lab staff test samples from horses competing at Ohio's seven commercial race tracks and more than 70 county fairs for prohibited substances under the commission's medication and drug related regulations. This internationally renowned laboratory provides testing on nearly 9,000 horses each year.

The Consumer Protection Laboratory was awarded three major competitive federal grants from the Food and Drug Administration and the U.S. Department of Agriculture for response to foodborne outbreaks, emergency management and to provide capacity for any Food Emergency Response Network-related projects.

The Food Emergency Response Network grant provides funding for method development and surveillance for highly pathogenic agents, such as anthrax, in food. The Consumer Protection Laboratory also provides critical expertise to respond to natural foodborne illness outbreaks or emergencies that are intentionally introduced.

In 2012, Microbiology Laboratory staff detected pathogens in meat and food samples that were subsequently linked to foodborne illness and multi-state outbreaks. The laboratory isolated Salmonella sp from hot pepper samples that were linked to salsa products which resulted in a multi-state recall in May 2012. The lab isolated Salmonella sp and L. monocytogenes from bagged spinach products in separate instances initiating two U.S. Food and Drug Administration recalls. A U.S. Department of Agriculture recall was initiated after lab staff identified L. monocytogenes in pre-cooked meatballs. In this instance, the pathogen isolate matched the U.S. Department of Agriculture isolates previously on record from sampling conducted at the manufacturing plant. In addition, staff detected L. monocytogenes from sprouts collected from a Cleveland plant, which resulted in a statewide recall. Lab staff helped investigate a multi-state Salmonella infantis outbreak related to dog food samples. More than 50 samples were

collected and analyzed; of these, five samples were linked to the outbreak strain. A report on this outbreak was released by the Centers for Disease Control.

Under a grant from the U.S. Department of Agriculture Agricultural Marketing Service, lab staff participated in the Microbiological Data Program, a national program to monitor fruits and vegetables for the presence of pathogenic microorganisms. Under the program, fresh fruits and vegetables are tested for Salmonella, E. coli O157:H7, and pathogenic E. coli using the latest DNA technology.

In 2012, the pesticide residue laboratory staff started screening samples of ground water for newer classes of pesticides. Around 30 samples were analyzed and about one third showed pesticide residues. Upon further examination, it was found that these residues were below the action threshold.

In 2012, chemists in the Consumer Protection Laboratory provided analysis of exhibition animals in Ohio's 94 state, county and independent fairs. This program, administered by the Ohio Department of Agriculture's Division of Animal Health, is one of the most comprehensive programs in the nation for evaluating exhibition animals for illegal drugs. These chemists also provided testing for exhibitions in other states.

The Pesticide Data Program, Microbiological Data Program, Microbiology Lab, and the Analytical Toxicology Lab are all accredited by the American Association for Laboratory Accreditation.

Under a grant from the U.S. Department of Agriculture Agricultural Marketing Service, Consumer Protection Lab staff members participate in the Microbiological Data Program, a national program to monitor fruits and vegetables for the presence of pathogenic microorganisms. Under the program, fresh fruits and vegetables are tested for Salmonella, E. coli O157:H7, and pathogenic E.coli using the latest DNA technology.

USDA Pesticide Data Program	1,469	167,962
Total	37,170	258,144

Ohio's Dairy Division helps assure that dairy products produced, transported and processed in Ohio are wholesome and safe for consumers. The division's registered sanitarians work daily across the state to provide critical services through a series of inspections, evaluations and sampling of raw and pasteurized milk products.

These activities meet or exceed the standards set by the U.S. Department of Health and Human Services, Food and Drug Administration and the U.S. Department of Agriculture. Ohio has adopted the Pasteurized Milk Ordinance as the state's Grade A rules. This ordinance is a model document as it relates to all state regulatory dairy activity and allows for dairy products to move in interstate commerce.

Ohio's Dairy Division staff members play an important role in providing protection to consumers, producers and processors. For example, every supply of milk coming off a farm is tested for drug residues before being made into a variety of dairy products. Every finished product made at all of the processing facilities is tested for bacteria, coliforms, vitamins, standard of identity, chemicals, pesticides and water quality. Additionally, processing plants are inspected quarterly and pasteurization equipment is tested quarterly.

Dairy producers also need to pass numerous monthly quality tests that include bacteria, somatic cell counts and water quality. Producers also undergo a rigorous inspection that is conducted every six months, with additional state, U.S.

Department of Agriculture, and Food and Drug Administration oversight.

Staff members also evaluate and regulate milk hauling. Proper permitting and evaluating tanks is critical to maintaining safety standards.

In 2012, milk production in the state was up 4.1 percent maintaining its rank of 11th in the nation. This level of milk production was achieved with 2,000 more milk cows and nearly 20,000 pounds of milk per cow. Ohio also maintained its rank of first in the nation in Swiss cheese production.

Small on-farm or artisan dairy production continues to flourish. Small processors are making products for farmers' markets and other retail locations, including ice cream, cheese, fluid milk and Greek yogurts.

Another area of growth in the state is robotic milking machines. By the end of 2012, Ohio had nearly 30 automated milking installations. Many more are in the works for 2013. As these facilities develop, division staff members continue to work closely with manufacturers and the Food and Drug Administration to ensure safety and compliance.

Ohio's milk production helps support the state's dairy processing industry.

Food Safety

The Division of Food Safety helps assure consumers are provided foods, over-the-counter drugs, dietary supplements and cosmetics that are safe, unadulterated and honestly presented. Division staff members work toward this goal through regulatory oversight of the wholesale and retail industry and through contracts, partnerships and educational activities with federal, state and local food regulatory agencies.

Division staff members work to increase awareness of food defense and assist operators in assessing their vulnerabilities. Representatives also participated in several key emergency preparedness activities, including Utility Radiological Safety Board, After Action Working Group and Ohio Homeland Security Strategic Analysis and Information Center meetings.

Food Safety Division's retail staff members continue to offer training and education programs to the local health departments. In 2012, more than 100 trainings and programs were available. These programs addressed farmers' markets, farm markets, cottage food, reduced oxygen packaging, acidified white rice, process reviews, home bakeries and labeling.

Division of Food Safety inspectors also inspect wholesale operations, such as bakeries, canneries, snack food and candy manufacturers, water and soft drink bottlers, seafood processors and food warehouses. Staff members who inspect wholesale operations also perform contract inspections for the U.S Food and Drug Administration and conduct weekly sampling for the U.S. Department of Agriculture's Pesticide and Microbiological Data Programs.

Chuck Kirchner, Chief,
Food Safety

Division staff members also conduct a food surveillance sampling program. This includes the routine sampling of ready-to-eat-foods and then testing for *Listeria monocytogenes*, *E. coli* O157:H7, *Salmonella* and generic *E. coli*. The samples collected included fresh produce, deli salads, sandwiches, bottled water, fresh juices, maple syrup and various imported canned food products.

In 2012, in conjunction with the Ohio Department of Health, Division of Food Safety staff members disseminated 191 food recall notices to local health officials and the public. The recalls, for a variety of food products, were issued based on bacteriological and allergen concerns.

Division of Food Safety staff and the Ohio Department of Health jointly conduct the Retail Food Safety Advisory Council meetings. These meetings are co-chaired by the directors of agriculture and health with council members representing local health departments, the retail food industry, academia and the consuming public. The council serves as a forum to discuss and resolve issues related to Ohio's food safety program.

Seafood is one of many types of foods regulated by the Division of Food Safety.

*Dr. Michael Hockman,
Chief, Meat Inspection*

provide meals to these growing numbers of consumers. The Division of Meat Inspection is required to inspect such providers if they don't meet the legal definition of catering. Division staff members provide daily inspection services to facilities that specialize in meal production and continue to work with other prospective facilities to license and enter this market. On the average these facilities produce a total of more than 100,000 meals per day.

The division's sampling program is a significant tool used to verify that an establishment's food safety system is working. The division conducts sampling on a wide range of products at a frequency that is comparable to that of the U. S. Department of Agriculture's Food Safety and Inspection Service (FSIS). FSIS provides 50 percent of the funding for the program. In 2012, meat samples were analyzed for E. coli O157:H7, Salmonella and Listeria monocytogenes, all of which are dangerous pathogenic microorganisms and linked to major foodborne illnesses.

For nearly two decades, the Ohio Department of Agriculture has supported the concept of allowing state-inspected establishments to be able to ship their state-inspected products across the state line. As a part of the 2008 Farm Bill, the Congress directed FSIS to promulgate changes to the laws allowing selected state establishments to ship their state-inspected products across the state line.

The Cooperative Inspection Programs: Interstate Shipment of Meat and Poultry Product final rule became effective in 2011. Department officials applied to and began working with FSIS to meet the requirements of the regulations. On August 8, 2012, Department Director David Daniels signed the Cooperative Interstate Shipment Cooperative Agreement.

Selected state inspected establishments, as a result of the Cooperative Interstate Shipment Program (CISP), will now be able to ship their products in interstate commerce. The advantage of qualifying for the CISP is that the establishment will still be inspected by the same state inspector, while having all of the United States as a market place, not just Ohio.

The Division of Meat Inspection helps assure that all meat and poultry establishments with a state license are producing safe, wholesome and truthfully labeled products in a sanitary environment.

Division staff members oversee 281 slaughter and processing facilities. Of those, 207 are fully-inspected facilities, which provide products that are eligible for re-sale within Ohio. The remaining establishments operate under a "custom exempt" status and simply provide a "not-for-sale" service to individuals who wish to have their own animals processed to be consumed by their own families. Division staff members also oversee seven establishments that have been selected for the Cooperative Interstate Shipment program.

The state's inspection approach is centered on an establishment's performance, incorporating the concepts of Hazard Analysis and Critical Control Point (HACCP) and Sanitation Standard Operating Procedures. The required HACCP procedures make each fully inspected establishment responsible for safeguarding the meat and poultry products they produce. The operating procedures help assure the environment in which the establishment operates is maintained in a sanitary manner.

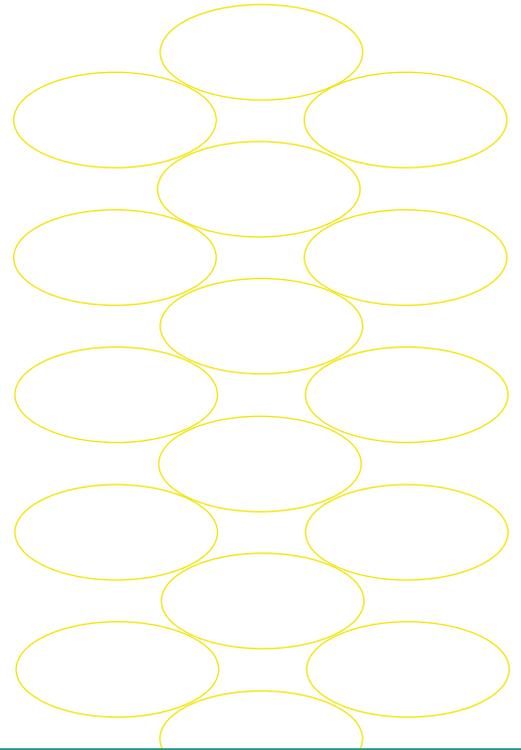

Additionally, establishments are expected to develop programs for the control of Listeria monocytogenes, programs to control Specified Risk Materials for preventing Bovine Spongiform Encephalopathy in cattle over 30 months of age, E. coli O157:H7 in beef and a variety of other prerequisite programs to support their food safety system.

The explosive growth in the numbers of charter schools, daycare centers and senior meal feeding programs across the state continues to provide opportunities for caterers and food service operators to modify their businesses in order to

Protecting the Public

Amusement Ride Safety

Under Ohio law, all amusement rides must be inspected and licensed before operating to assure they are assembled, maintained, and operated in a manner that will minimize the possibility of accidents or injuries to the riding public. The Ohio Department of Agriculture's Amusement Ride Safety Division inspectors are responsible for the safety and regulation of all Ohio rides. The inspectors evaluate everything from the structural safety and warning signs to general ride operations. Inspectors also license go-kart tracks and water parks. Ohio was the first state to enact a Rider Responsibility Act that stresses the consumer's role in amusement ride safety. The division also assures that midway games of skill and side shows operating at all 94 county and independent agricultural fairs and the Ohio State Fair are fair and properly operated.

Ohio is known for the quality and quantity of its amusement parks. The state is also known for having one of the best ride inspection programs in the country. The department's Division of Amusement Ride Safety regulates this industry and helps assure that all rides in Ohio are safe.

In 2012, division staff licensed 252 permanent facilities and amusement parks, 34 go-kart facilities, and 23 water park facilities. Department staff also inspected 392 portable ride companies. Department staff inspected licensed and maintained records on all 3,475 amusement rides and 664 games in the state. By law, all amusement rides must be inspected and

*Gary Hill, Chief,
Amusement Ride Safety
and Enforcement*

licensed before operation to help assure they are assembled, maintained and operated according to manufacturer’s recommendations and specifications. State inspectors also perform random, mid-season inspections on amusement rides.

Inspectors monitor ride structure and operations, structural integrity, electrical safety, hydraulic systems, brakes, tubs, sweeps, warning sign displays, and general ride operations are all thoroughly checked. In addition to inspecting amusement rides, the division is also responsible, and works to assure the fairness of midway games and side shows at the Ohio State Fair and all 94 county and independent fairs. Annually 7,000 concession inspections are conducted during those fairs.

Enforcement

The Enforcement Division provides support for the Ohio Department of Agriculture’s regulatory divisions in gaining compliance with Ohio’s agricultural laws and regulations. If a business or a person regulated by the state of Ohio fails to heed state laws and regulations, the Enforcement Division takes appropriate action. This may be in the form of notices of violations, letters of warning, administrative action, or criminal prosecutions.

Gaining food safety regulation compliance is especially important because non-compliance can pose a risk to the public’s health or safety. In calendar year 2012 Enforcement Division staff conducted 374 investigations, conducted 470 random reviews/planned compliance inspections and embargoed 27,268.95 pounds of misbranded or adulterated products.

The department has entered into a contract with the Ohio Veterinary Medical Licensing Board authorizing enforcement agents to conduct investigations regarding complaints against its licensees in Ohio. The Enforcement Division has been conducting these investigations since October 2000.

The Auctioneer Program, housed within the Enforcement Division, oversees Ohio’s 3,268 active licensees. There are five license types: Auctioneer, Apprentice Auctioneer, Special Auctioneer, Auction firm, and Auction Corporation, partnership or association.

The Auctioneer Program issues licenses, gives license examinations, and receives and processes complaints against auctioneers. When a complaint is received, the investigation is referred to the Enforcement Chief for assignment to an investigator. Once the investigation is complete, the file is reviewed.

There have been two major pieces of legislation passed since the program’s arrival at the Ohio Department of Agriculture. The first established the auctioneer recovery fund and the second was a major overhaul of the auction law.

Livestock Environmental Permitting

Ohio's Division of Livestock Environmental Permitting regulates Ohio's largest livestock and poultry farms. Inspectors assure the farms follow science-based guidelines that protect the environment and allow the facility to remain productive while managing manure, mortalities, flies, rodents and other pests.

As of December 31, 2012, there were 182 permitted farms in Ohio. In 2012, staff members issued permits to 27 large livestock and poultry farms, including 22 Permits to Install and 27 Permits to Operate. Of those 27 Permits to Operate, 19 were renewal permits. Permits to Operate allow the farms to operate for a period of five years, at which time they are required to apply for a renewal, which is also valid for five years. In addition, there were 15 Major Operational Changes issued to permitted facilities which authorize construction or expansion projects. At year-end 2012, there were 26 farms that had pending applications that were being processed.

Inspectors conducted 348 inspections during 2012. Of this total, 296 were routine inspections on permitted facilities, 10 were partial inspections and 42 were inspections of Certified Livestock Managers.

Certified Livestock Manager training is required for those who manage or handle manure at a major concentrated animal feeding facility or anyone who buys, sells, or land applies more than 4,500 dry tons or 25 million gallons of liquid manure a year.

One two-day training session was conducted during 2012. Sixty individuals participated on the first day of training and 62 on the second day. During 2012, 34 new Certified Livestock Manager certifications were issued and 58 were recertified. Since the program began in 2004, a total of 191 have received certification.

*Kevin Elder, Chief,
Livestock Environmental
Permitting*

Ohio Department of Agriculture officials are waiting for a final decision from U.S. EPA on the transfer of federal National Pollutant Discharge Elimination System (NPDES) permitting authority. Ohio division staff members developed the final rule revision necessary to transfer the NPDES permitting authority over Ohio's large livestock and poultry farms from Ohio Environmental Protection Agency to the Ohio Department of Agriculture. In consultation with the U. S. Environmental Protection Agency, Division staff members identified the final Ohio statutory revision that was required to meet the requirements of U.S. Environmental Protection Agency. The statute has been drafted and is pending passage by the Ohio Legislature.

In 2012, inspectors also responded to 18 complaints (14 oral and four written). Of the total, 10 involved manure applications, four were complaints about flies, two were odor issues, two were complaints about possible manure discharges. Of the 18 complaints investigated, 14 were found to be unsubstantiated. Sixteen enforcement actions were issued in 2012, which included warning letters, notices of deficiencies, and emergency orders. Through outreach and education, staff members achieved a 55 percent decrease in complaints from 2011 to 2012.

Permitted facilities in the Grand Lakes St. Marys watershed are now exporting over 96 percent of the manure they produce to replace commercial fertilizer on cropland areas outside the watershed.

*Fran Elson Houston,
Chief, Weights
and Measures*

Ohio law designates the Director of the Ohio Department of Agriculture as the “State Sealer” of weights and measures. The Ohio Department of Agriculture administers the Metrology Laboratory, which houses the state standards of mass, length and volume. Ohio’s Metrology lab was honored when it received accreditation certificates to the International Standards Organization (ISO) 17025 laboratory standard and successfully underwent an onsite assessment by the National Voluntary Laboratory Accreditation Program to continue that level of accreditation. Ohio’s Metrology Laboratory is one of only 15 state measurement laboratories in the U.S. to achieve the ISO 17025 level of accreditation, which provides necessary traceability for Ohio manufacturers and other businesses using these metrology services.

Ohio boasts one of only four National Type Evaluation Program (NTEP) Laboratories in the nation that test and evaluate new scale designs and technology, keeping Ohio on the cutting edge of today’s technology. The Ohio lab is also authorized by Canada to test for compliance to Canada’s standards and is one of only two state labs in the nation authorized to test scales for compliance to international standards. The Ohio lab is the only lab in the U.S. authorized to test multi-dimensional devices. National statistics released in 2012 show Ohio’s NTEP laboratory continues to be one of the busiest and most productive in the U.S.

The Division of Weights and Measures helps to assure consumer confidence and equity in the marketplace by administering and enforcing all laws pertaining to true and uniform weights and measures standards. The division works with county and city weights and measures programs to test devices ranging from fuel meters and retail store scanners to vehicle and livestock scales for consistent measuring standards.

Training over 140 county and city weights and measures inspectors and keeping them up to date on new technology used in today’s gas pumps and supermarket scales is a huge task. The National Conference on Weights and Measures made significant changes to the testing procedure for scales. In 2012, the Ohio Department of Agriculture provided training regarding these significant issues and other Ohio laws to the state’s 90 local weights and measures offices and all inspectors. Training was also conducted for 256 of Ohio’s 495 registered service people, representing 65 different scale and meter service agencies. This is done as a means to promote uniform inspecting and testing procedures throughout the state.

Supporting Rural Ohio

Farmland Preservation

The Office of Farmland Preservation strengthens the base of the state's top industry, food and agriculture. Staff members assist farmers and local officials with farmland protection efforts and educate the public about the importance of saving Ohio's valuable farmland. The quality and quantity of agricultural commodities produced in our state is dependent upon the land available for farming. Recognizing this fundamental relationship, the department works to maintain the state's agricultural heritage while providing food and jobs.

During 2012, the Office of Farmland Preservation reached a milestone by permanently preserving 50,000 acres of farmland through agricultural easements. An agricultural easement is a voluntary, permanent, legally binding restriction placed on a farm. The easement limits the use of the land to predominantly agricultural activity. The land remains under private ownership and management and stays on the tax rolls under current agricultural use valuation. The farmland can be sold or passed along as a gift to others at any time, but the restriction prohibiting non-farm development stays with the land. Agricultural easements may be acquired through purchase or donation.

*Denise Franz King
Executive Director,
Office of Farmland
Preservation*

Acres Preserved (2012):

Clean Ohio Ag. Easement Purchase Program 28 farms, 3,571 acres

Acres Preserved to Date (2001-2012):

Clean Ohio Ag. Easement Purchase Program	40,777 acres
Ag. Easement Donation Program	6,390 acres
Tobacco Ag. Easement Purchase Program (2002)	2,940 acres
Total (2001-2011)	50,107 acres
Agricultural Security Areas	32,022 acres

The office also provides technical assistance to local boards of county commissioners and boards of township trustees on the Agricultural Security Area Program, and participates in the largest statewide gathering addressing farmland protection, the annual Ohio Farmland Preservation Summit.

In 2012, the Office renamed its purchase program the Clean Ohio Local Agricultural Easement Purchase Program. Localizing the program has three purposes: 1) to build local capacity by certifying local sponsors to hold and administer their own local agricultural easement purchase programs; 2) to reduce the administrative role of the state staff; and 3) to attract additional federal farmland preservation funds to Ohio. It went into effect for easements purchased in 2013.

Just like its predecessor, the Clean Ohio Agricultural Easement Purchase Program, the new program purchases agricultural easements from interested Ohio farmland owners. Awards are issued for up to 75 percent of the points-based appraised value of a farm's development rights. A payment cap is \$2,000 per acre, with a maximum of \$500,000 per farm. All easement transactions are recorded on the property deed and transfer with the land.

Since the beginning of the purchase program, the Office of Farmland Preservation has received approximately 2,400 applications, and with available funding, preserved 220 of

those farms, totaling 40,777 acres. Note that in 2012, the Office of Farmland Preservation did not receive funding to purchase additional easements; therefore no landowner application period was held.

The Ohio Agricultural Easement Donation Program allows land owners to donate development rights of their land to the State of Ohio or local governments for the purpose of protecting productive farmland from conversion to non-agricultural use. A total of 53 farms have donated easements to the state, which equal nearly 6,390 acres.

The office expanded the reach of its donation programs by introducing the Agricultural Easement Donation Partnership Program in 2012. Under this program, the department encourages local capacity-building by providing local partners (counties, townships, soil and water conservation districts and land trusts) up to \$3,000 in administrative costs for the donation of farms up to 200 acres, with an incentive of \$5 an acre for larger farms.

The Ohio Agricultural Security Area (ASA) Program authorizes one or more landowners of at least 500 acres of contiguous farmland to request enrollment into an ASA for a 10-year period. The Office provides technical assistance to farmers and local officials. Since 2005, more than 32,022 acres have been enrolled.

Markets

When consumers buy Ohio-grown, raised or processed products, they help support local farmers and economies and the state's multi-billion dollar food and agriculture industry.

The Markets Division provides marketing services to Ohio's food and agricultural sectors to help retain and create jobs and enhance their competitive advantage in Ohio and the United States. The division has two major program areas: Ohio Proud and Ohio Grape Industries.

Ohio Proud is the state's domestic marketing program that promotes Ohio food and agricultural products within Ohio's borders and beyond. The logo helps consumers identify foods that are made in Ohio and grown in Ohio. Ohio Proud supports the state's goal to provide safe, local foods to consumers and to create new opportunities for Ohio growers, producers and processors.

In 2012, Ohio Proud had 463 partners. The Ohio Proud mobile kitchen featured local products through cooking demonstrations over the lunch hour in downtown Columbus. Area chefs prepared recipes with local produce and other products and provided samples to the public.

A 2012 Holiday Advertising Campaign consisted of web ads which targeted consumers who are interested in local foods and entertainment. Beginning November 20, a four week campaign produced 3,051,663 impressions on the web. During

the campaign, the website had 84.66 percent new visitors in November and 79.03 percent in December.

Holiday videos offering suggestions for Ohio Proud themed gift baskets were also created and posted on social media. These gift baskets were then delivered to local radio and television stations encouraging them to promote during the holidays. This effort started a relationship with a Columbus television personality who filmed stories about Ohio Proud companies and aired them on the local segment of the noon news.

Ohio Proud also increased their presence with social media this holiday season by creating a Pinterest page: <http://pinterest.com/ohioproud/>. The Ohio Proud Pinterest page offers recipes, gardening, entertaining and gift ideas using Ohio products. This has been a great opportunity for the program to feature its specialty food and nursery partners.

Division of Markets staff helped implement the Agriculture is Cool! program at the Ohio State Fair. In 2012, fourth grade students and a parent received free admittance to the state fair and had the opportunity to learn about Ohio agriculture. Students were encouraged to visit various educational stations on the fairgrounds and then write an essay about why agriculture is cool. Four winning students were presented with \$500 scholarships.

Ohio Grape Industries

The Ohio Grape Industries Program oversees promotional, research and production funds for the grape and wine industries, as determined by the Ohio Grape Industries Committee.

In accordance with state law, the director of the Ohio Department of Agriculture serves as chairman of the nine-member committee, whose activities are funded from a portion of the excise tax on the sale of wine in Ohio.

The program serves as the marketing and promotional advocate of Ohio's grape and wine industries. The program also supports grape growers by funding research and extension programs focusing on viticulture (cultivating grapes), entomology, plant pathology, and weed science.

Ohio is home to nearly 200 wineries that produce more than 1.1 million gallons of wine per year. Ohio also has more than 1,600 acres of grapes, with Riesling the most widely grown variety.

The committee worked closely with the Wholesale Beer Wine Association of Ohio, the Ohio Grocer's Association and the Ohio Restaurant Association to promote Ohio Wine Month 2012. During June, the industry supported several print and social media advertising campaigns, as well as participated in numerous consumer awareness events. Also a new "Ohio Wine Month" video was also created by the Ohio Department of Agriculture and was posted on the industry home page and the department's YouTube page.

The Ohio Grape Industries Committee, as a part of the industry's strategic planning process conducted in the fall of 2010, voted to publish a custom Ohio wine publication – Exploring Ohio Wine Country. The committee contracted with Great Lakes Publishing, the publisher of Ohio Magazine and other well-received publications, to produce this publication. Exploring Ohio Wine Country debuted on May 23, 2012 and included the new 2012 Ohio Wine Guide, as well as Ohio wine editorial and advertisements.

This magazine helped to create and market regional identities (an industry goal from the strategic marketing plan process) for each of Ohio's wine regions, including the Appalachian, Canal Country, Capital City, Lake Erie Shores and Islands, Ohio River Valley and Vines and Wines wine regions. There were 150,000 copies of the 40 page, glossy, full-color magazine printed and distributed at various locations including convention and visitor's bureaus, AAA offices, Ohio Department of Transportation Travel Information Centers, hotels and lodging businesses, state parks, wineries, and more. A digital version of the magazine can be viewed at: www.glpublishing.com/digitaleditions/expohwinecountry2012/index.html.

More than 20 wineries participated in the Ohio Grape Industry Committee's cost-share road signage program in 2012. Consistent "Ohio Wine" road signs can now be seen on state routes and highways across the state, making it easier for travelers to locate an Ohio winery.

Ohio Century and Bicentennial Farms Program

Seventy-eight farms were recognized by the Ohio Department of Agriculture in 2012 as century farms. Century farm status is awarded to families who have owned the same farm for at least 100 consecutive years.

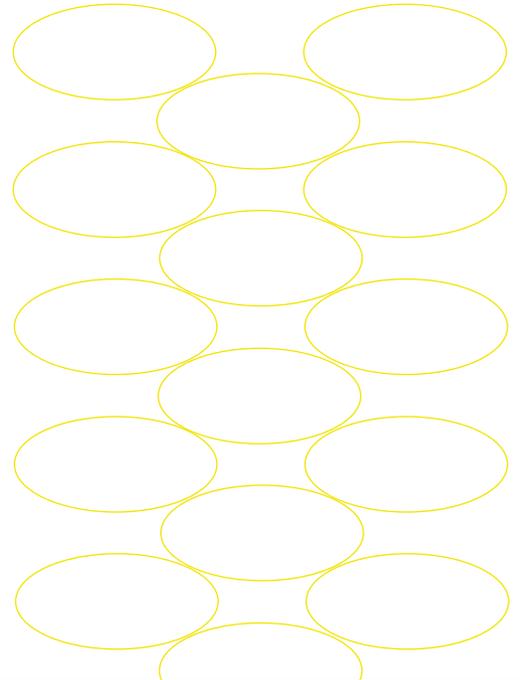

To recognize the growing number of farms which have reached their 200-year anniversary, the department unveiled plans for its new Ohio Bicentennial Farm designation. Sixty-four farms currently registered as century farms will receive the new designation at their 2013 county fair.

More than 1,000 farms spanning all 88 counties are now registered as century or bicentennial farms.

Anyone who can verify that a currently-owned farm has remained in their family for at least 100 years may register. For more information, visit www.agri.ohio.gov and click on "Promotional Programs" and then "Century Farm Recognition", or call 614-752-9817.

The Daniels farm was one of 78 farms inducted into the Ohio Century Farm program in 2012. This program honors families who have maintained the same farm for at least 100 years. The Bicentennial Farm program, announced in 2012, recognizes families who have maintained the same farm for at least 200 years.

Acknowledgements

Estimates made by the Ohio Field Office are based on information supplied by farmers and agri-businesses. These estimates are the result of the data collected on probability designed surveys. Considerable information is collected from farmers randomly selected for telephone or personal interviews. Data for county estimates are collected from a large mail survey, and where available, check data are used to the extent possible.

1/ Value of agricultural sector production is the gross value of the commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-or-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development. 2/ A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales. 3/ Revised.

TABLE 55

Farm Assets, Debts and Ratios, U.S. 2008-2011

Assets, Debts and Equity	United States			
	2008 ¹	2009 ¹	2010 ¹	2011
			Million Dollars	
Farm Assets	2,023.3	2,054.4	2,190.9	2,383.9
Real Estate	1,703.0	1,724.4	1,853.7	2,034.7
